*Election/Restrictions*

1. Claims 1-6, 9-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected apparatus, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/29/08.

*Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 7-8 rejected under 35 U.S.C. 102(b) as being anticipated by Wittenborg (US #4,388,338).
4. Regarding claim 7, Wittenborg discloses a method for applying content on the surface of a beverage comprising:
  - a. Agitating the surface of the beverage (column 2, lines 64-68, the surface is agitated by being sprayed with pressurized liquid) in a pattern correlated to the content (column 3, lines 38-45), by using a content application head (nozzle head, column 2, line 66).
5. Regarding claim 8, Wittenborg further discloses receiving a content specific signal and issuing control signals to the content application head such that the content

Art Unit: 4152

application head is actuated to apply the content onto the surface of the beverage (column 3, lines 11-26, the system is actuated upon the activation signal when the beverage is ready to have content applied, and the signal is specific to the amount of foam desired).

*Claim Rejections - 35 USC § 103*

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were

Art Unit: 4152

made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ben-Matitayhu (US # 5,795,395).

10. Regarding claim 7, Ben-Matitayhu discloses a method for applying content on the surface of a foodstuff comprising:

b. Agitating the surface of the foodstuff (by applying edible colorant from an inkjet printer (column 2 lines 15-16, column 1 lines 22-23), in a pattern correlated to the content (column 1, lines 25-30) by using a content application head (column 1, line 61).

11. Regarding claim 8, Ben-Matitayhu further discloses receiving a content specific signal and issuing control signals to the content application head such that the content application head is actuated to apply content onto the surface of the foodstuff (column 4, lines 38-67, the signal to actuate the content application head is given when the foodstuff is an appropriate distance from the content application head, said signal specific to the size of the foodstuff to have content applied on its surface).

Art Unit: 4152

12. Although the process of Ben-Matitayhu is not explicitly disclosed to be used for beverages, it would have been obvious to use a method for applying content to the surface of a foodstuff to apply content to the surface of a beverage, since all the elements were known at the time of the invention and could have been combined to obtain predictable results.
